8. Do you have general improvement proposals for the existing apps?

Anzahl Teilnehmer: 4

- -No crashes on opening Chat(Android)
  -Dark mode(!)
- May be we can display our lecture timing in a particular day as outlook shows us if we have meeting coming with notification.
- All dishes under the menu are listed in German, maybe there could be an English version of the menu for international students who aren't affluent with the native language.
- The only one improvement:

  On the hof university website:

  A page that displays on a 2 weeks calendar (for the even and odd week) the schedule of the courses I select on a dropdown menu (with an option to select only modules that are taught in english). So I can easily see if I have overlapping slots and see if I have free slots to work freely on what I have.
  When I click on a course's slot on the calendar, it displays the information of the course (name, room, teacher, description, nb of ECTS, type of exam).
  And then, I can export this generated calendar for the whole semester on Outlook or Gmail, with only the name, the room and the teacher for each slot.

  OR

  Create a shared calendar for each course that all the students can download + add on their Outlook or Gmail account. So, if there is an update, the owner of the shared calendar update it, and all the students receive the modification on their smartphone.

  If something like this already exists, it's a big issue because I never heard about it before.
